Education

Indian Institute of Information Technology, Design and Manufacturing

Nov. 2023 – May 2027

Bachelor of Technology in Mechanical Engineering

Kancheepuram, Chennai

Relevant Coursework

- Data Structures
- Algorithms Analysis
- Artificial Intelligence
- Systems Programming
- Software Methodology
- Database Management
- Internet Technology
- Computer Architecture

Experience

Outflo AI

May 2025 – Aug 2025

Founding FullStack Developer

Bangalore

- Architected and migrated to a scalable queue-worker system utilizing AWS SQS, replacing a legacy cron-based architecture to handle high-throughput task scheduling and execution.
- Engineered the complete frontend architecture and successfully integrated it with backend services within a strict one-week timeline to meet aggressive product launch goals.
- Reverse-engineered undocumented LinkedIn APIs to facilitate robust data extraction and workflow automation.
- Identified and resolved critical race conditions between concurrent background jobs, ensuring data integrity and system reliability under heavy load.

Projects

OutreachIQ | Next.js, Supabase, Redis, Groq AI, LinkedIn Voyager

outreachiq.nirvan.dev

- Designed a production-grade LinkedIn automation platform to manage multi-step campaigns, track lead lifecycles, and synchronize cross-account messages via Unipile SDK.
- Engineered a distributed background task queue utilizing Upstash Redis and Vercel Cron to process scheduling and execute API actions atomically with exponential backoff.
- Integrated Groq ('llama-3.3-70b') and Google Calendar APIs to autonomously parse conversation intents, detect interest signals, and book meetings.
- Implemented an end-to-end Stripe billing system featuring checkout sessions, customer portals, and comprehensive webhook handling.

TranscodeX | AWS (Lambda, S3, ECS Fargate), React, FFmpeg

transcodex.nirvan.dev

- Architected a serverless, event-driven video transcoding pipeline on AWS to automatically process raw media uploads into 480p format.
- Optimized system throughput by utilizing S3 presigned URLs for direct browser-to-bucket uploads, successfully handling files up to 2GB without backend bottlenecks.
- Minimized compute costs by configuring custom CloudWatch alarms to trigger Dockerized FFmpeg ECS Fargate tasks strictly in batches of ten.
- Secured the application architecture utilizing Amazon Cognito for user authentication and API Gateway JWT Authorizers to protect downstream resources.

Technical Skills

Languages: Python, Java, Golang, C++, C, SQL, JavaScript, HTML/CSS

Databases: PostgreSQL, MySQL, MongoDB, Qdrant, Redis, Supabase

Cloud & Infrastructure: AWS (S3, SQS, Lambda, ECS Fargate, Cognito, API Gateway), Docker

Backend & Frameworks: FastAPI, LangChain, Next.js, React, Git, FFmpeg, Stripe

Awards and Achievements

- **Semi-Finalist** at the **ET GenAI Hackathon**, selected from over **55,000 participants**.
- Solved **600+ problems** on LeetCode, achieving a highest global rank of **1847** and a peak rating of **1708**.
- Secured **1st Prize** at **Atomquest by Atomberg** (2026), developing innovative technical solutions against rigorous evaluation criteria.
- Won **2nd Prize** at the **DevShowdown Hackathon** (2023), rapidly prototyping and deploying a full-stack application within 48 hours.
- **Active Contributor** to open-source repositories, with **14 PRs merged** in **ruxailab** and **anakin (YC 21)** as part of Google Summer of Code (GSoC) preparation.
